## EXPERIENCE

Redblox Technology, Puducherry - Software Developer  
Jul-(2022) - PRESENT.

## EDUCATION

St, Joseph's college of arts and science ( Autonomous ),  
Cuddalore – 1. — M.Sc(Computer Science).  
Jul(2020) - Jul(2022)  
C.G.P.A - 8.2

## PROJECTS

### **Datashub :**

Description:

- Develop a mobile application that allows users to conveniently to store the users data using survey data which is provided by the user. The app should provide a seamless user experience, easy navigation, and efficient order processing.
- Users can use LTR and RTL feature based on the survey language.
- Users can also save the data by locally , user can submit the survey once they fully completed the details and before the survey closed.
- Total components rendered based on the conditional rendering so the survey collector may collect the survey more efficiently .

### **Sprytz (Order Mobile App)**

- Develop a mobile application that allows users to conveniently order food from local restaurants and have it delivered to their doorstep. The app should provide a seamless user experience, easy navigation, and efficient order processing.
- Users can browse through a list of nearby restaurants.
- Filters and search functionality to help users find restaurants based on cuisine, ratings, and location.
- This application contains multiple login system (users , restaurants and onboardings ).

### **Sprytz ( Dispatcher Mobile App )**

- Working in Sprytz mobile dispatcher application, In this application delivery partner accept the order after the restaurant accept the order from the user then the restaurant assigned the task or order to the delivery partner.
- Then the delivery partner receive the foods and dishes from restaurant and deliver the foods and dishes to the user with the help of map.
- The user view the current location of the delivery partner and also the delivery partner view the user location that was the user placed order details.
